

**IN THE UNITED STATES DISTRICT COURT
FOR THE NORTHERN DISTRICT OF GEORGIA
ATLANTA DIVISION**

ALPHA PHI ALPHA FRATERNITY
INC., *et al.*,

Plaintiffs,

v.

BRAD RAFFENSPERGER, in his
official capacity as Secretary of State of
Georgia,

Defendant.

CASE NO. 1:21-CV-05337-SCJ

**SUPPLEMENTAL BRIEF REGARDING SUMMARY JUDGMENT
BRIEFING BASED ON ALLEN v. MILLIGAN**

RETRIEVED FROM DEMOCRACYDOCKET.COM

INTRODUCTION

As much as the parties and this Court anticipated the Supreme Court’s ruling in Allen v. Milligan, Case No. 21-1086, 2023 WL 3872517 (U.S. June 8, 2023), the decision provided far less direction for the future of this case than expected because it did not alter or clarify the law of Section 2. Many of the arguments made by Alabama that were rejected by the majority are not raised by Defendants in this case. On other points, such as the impact of race on illustrative plans, only four Justices agreed on any particular approach. Alabama also did not advance the substantive arguments raised on several critical points contested in this case, including the issue of partisan polarization.

Ultimately, the ruling in Allen underscores a key issue in Voting Rights Act cases—the facts matter because the application of Gingles remains “peculiarly dependent on the upon the facts of each case.” Roberts,¹ p. 11 (quoting Thornburg v. Gingles, 478 U.S. 30, 79 (1986)). This Court must still carefully apply the relevant law to the facts of this case to determine whether

¹ For ease of reference, this brief references the PDF slip opinion released by the Supreme Court by the name of the Justice and page of that Justice’s opinion. That opinion is available at https://www.supremecourt.gov/opinions/22pdf/21-1086_1co6.pdf

the lack of electoral success Plaintiffs claim is occurring is because they are numerical minorities who lose elections in a majoritarian system or because they are facing vote dilution “on account of race or color.” Holder v. Hall, 512 U.S. 874, 914 (1994) (Thomas, J., concurring). The undisputed material facts demonstrate that Plaintiffs have not put forward sufficient evidence demonstrating they are facing vote dilution on account of race or color as a result of Georgia’s redistricting plans. Accordingly, this Court should grant judgment in favor of Defendants.

DIFFERENCES IN ALLEN AND DEFENDANTS’ ARGUMENTS

To review the impact of Allen, it is first important to note the arguments Alabama advanced that the majority rejected, but which are not raised in this case. Defendants are not arguing for the map-comparison test sought by Alabama. Roberts, pp. 27-28. Nor are Defendants arguing for an intent standard in map design or that Section 2 does not apply to single-member redistricting. Roberts, pp. 29-34. Nor are Defendants seeking to overturn Gingles—but rather to apply it faithfully. Kavanaugh, pp. 1-2.

The complete lack of any discussion about partisanship driving voting patterns at the Gingles preconditions phase is also a huge difference in Allen and this case. The only reference in the opinions to primary elections is when Justice Thomas explains that the plaintiffs offered evidence of racial voting

patterns in the Republican primary—unlike this case. Thomas, pp. 26-27. Thus, Alabama apparently did not press any issues at the Supreme Court related to the impact of race and partisanship as Defendants do here.

Further, Alabama did not contest any of the factual findings of the district court, instead (apparently) opting to make legal arguments only on the appeal. Roberts, pp. 14-15.

The difference in the arguments by Alabama and Defendants limits the benefit of Allen in this case, because the major issues ruled on by the majority are not at issue in this case. And especially in light of the apparent confusion over Alabama's actual arguments (see, e.g., Alito, p. 9), and the clear-error review standard (Roberts, pp. 14-15), the opinions do not break new ground in a way that materially assists this Court with resolving these cases.

APPLYING ALLEN

Turning to the points where Allen offers at least some direction in this case, it is important for this Court to carefully review what the Supreme Court said and especially what portions are binding precedent.

I. The first Gingles precondition.

A. The Allen opinions on the first Gingles precondition.

First, the Justices disagreed with each other about the proper application of the first Gingles precondition, which was apparently the primary

focus of Alabama’s argument. Chief Justice Roberts’ opinion commanded five votes for all sections except for III–B–1, which addressed a similar issue to that raised by Defendants in this case—the question of how to assess racial predominance in the illustrative plans. That portion received only four votes. Justice Thomas’ dissent likewise received four votes for Parts II–A and II–B, which addressed racial predominance in the illustrative plans and questions related to proportionality. As discussed below, all of the various comments made by the pluralities on this point are relevant to the pending motions.

All the Justices who touched the topic agree that race cannot predominate in the creation of illustrative plans, even if “the line between racial predominance and racial consciousness can be difficult to discern.” Roberts, p. 23; compare Thomas, pp. 10-11. But no method for determining where that line is drawn garnered a majority of votes on the Court.

Justice Thomas, joined by three others, would have determined that Section 2 plaintiffs “cannot satisfy their threshold burden of showing that a reasonably configured alternative plan with a proposal that could only be viewed as a racial gerrymander if enacted by the State.” Thomas, p. 21. The four Justices in that portion of the dissent criticize the Allen plaintiffs’ map-drawers for prioritizing “race over neutral districting criteria” even when the

map-drawers testified that they did not make this prioritization. Compare Thomas, p. 14 with Roberts p. 23.

In contrast, Chief Justice Roberts, also with three other votes, was willing to accept the testimony of Bill Cooper (one of plaintiffs' mapping experts), over the relative lack of evidence from Alabama of racial predominance. Roberts, p. 23-24. But the Chief Justice's opinion acknowledges that the eleven illustrative maps in that case were "districting maps that Alabama could enact." Roberts, p. 12. Justice Kavanaugh does not address the issue.

The majority noted that the only apparent counterarguments by Alabama to the illustrative plans was that they divided the Gulf Coast region, which was a community of interest in the southwest area of the state, and that the adopted plan performed better on core retention. Roberts, pp. 12-13. The majority then relied on the testimony about the community-of-interest nature of the Gulf Coast and the fact that a community of interest would be divided under either the state's plan or the illustrative plans. Roberts, p. 13. Notably absent from the portion of the Chief Justice's opinion that garnered five votes is any analysis of the particular boundaries involved—only the general arguments made by Alabama.

But the approaches taken by both Chief Justice Roberts and Justice Thomas demonstrate that race predominated in the creation of the illustrative plans in this case. Unlike Alabama, Defendants here do not argue that every illustrative plan hits a racial target. Roberts, p. 25. Instead, Defendants focus particularly on boundaries and design of the illustrative plans, all of which would be considered racial gerrymanders if enacted by the State—and thus maps the State could not enact, unlike the maps in Allen. Roberts, p. 12.

B. The illustrative plans in this case.

When Mr. Cooper was creating his illustrative maps for the Senate and House, he turned on features in the software to indicate where Black individuals were located. [Doc. 231, ¶ 36]. And Mr. Cooper did not have any political data available to him. Id. at ¶ 37. He also did not review any public comments. Id. at ¶ 38. Plaintiffs' goal in offering their illustrative plans was a racial one: to determine whether they could draw additional majority-Black districts beyond those drawn by the state plans. Id. at ¶ 33.

If the legislature had used racial shading, did not use political data, and drew without reviewing any public comments, it would be accused of racial gerrymandering—exactly as it has been in the three-judge panel cases. There is no indication in the Allen decision that Alabama advanced any arguments about the nature of the drawing process beyond its proposed race-neutral,

alternative benchmark. Under the facts here, clearly Plaintiffs “cannot satisfy their threshold burden of showing that a reasonably configured alternative plan” by presenting a plan that would be a racial gerrymander if enacted by a state. Thomas, p. 21.

Moving to each specific plan, Mr. Cooper changed more than half of all districts from the enacted Senate plan. [Doc. 231, ¶ 42]. In drafting the illustrative Senate District 23, Mr. Cooper connected Black voters separated by intervening white populations. *Id.* at ¶ 43. Mr. Cooper also made racial splits of counties in the creation of illustrative District 23, including higher concentrations of Black voters in counties while excluding lower concentrations of Black voters when a county was split. *Id.* at ¶ 46. All of these facts distinguish this district from the challenged district in Allen, where Alabama apparently relied solely on a theory that a community of interest was divided. Roberts, pp. 12-13.

Further, to create Senate Districts 17 and 28, Mr. Cooper strategically cut counties to ensure that areas with higher concentrations of Black voters were connected with more distant concentrations of white voters. [Doc. 231, ¶ 47]. This resulted in the largest counties by population in illustrative Senate Districts 17 and 28 not containing a majority of Black individuals—a features that infects many of Mr. Cooper’s illustrative districts. *Id.* at ¶ 48. Unlike the

plaintiffs in Allen, Mr. Cooper could not identify a basis to connect northern Clayton County and rural Spalding County in his configuration of this South Metro area beyond the race of the individuals in both parts of the district. [Doc. 231, ¶ 49].

Finally, unlike the similar metrics of the Alabama plan, Mr. Cooper's illustrative Senate plan only has a similar number of county splits because Mr. Cooper unsplit counties in parts of the state unrelated to the additional majority-Black districts to make the total split number appear more similar. [Doc. 231, ¶ 50]. This is distinctly different from the Allen illustrative plans. Roberts, p. 12.

Turning to the illustrative House plan, Mr. Cooper changed more than half of all of the House districts from the enacted plan. [Doc. 231, ¶ 52]. To create House District 133 as a new majority-Black district, Mr. Cooper had to add county splits in the area above the total in the enacted plan, including splitting seven rural counties in several adjoining districts. Id. at ¶ 53. To create House District 145 as a new majority-Black district, Mr. Cooper had to adjust Macon districts so that no House district is wholly within Bibb County and each of the majority-Black districts in that area includes population from downtown Macon, including one district that crosses out of the Macon Census statistical area. Id. at ¶ 54. To create Districts 74 and 117 in metro Atlanta,

Mr. Cooper had to connect portions of counties with higher concentrations of Black voters with more-rural, white areas. Id. at ¶ 55. Finally, in southwest Georgia, illustrative District 171 connects disparate enclaves of Black population and splits additional counties to include Black population in the district. Id. at ¶ 57.

To create the additional majority-Black districts on his illustrative House plan, Mr. Cooper elongates other surrounding districts to create “room” for the new districts to connect racially disparate populations. [Doc. 231, ¶ 58]. This impacts the compactness of the districts, lowering the overall compactness of the districts created in the illustrative plan. Id. at ¶ 59.

Finally, Mr. Cooper’s illustrative House plan has higher total population deviations than the enacted plan. [Doc. 231, ¶ 60]. Although the illustrative plan has a number of county splits similar to the enacted plan, that is only because Mr. Cooper unsplit counties in parts of the state unrelated to changes to make the total split number appear more similar. Id. at ¶ 61.

Mr. Cooper’s illustrative plans in this case are thus categorically different than the plans in Allen. They split more counties, have higher deviations, and have features that are unexplainable on grounds other than race.

C. Applying Allen to the first Gingles precondition.

Defendants agree with how Justice Alito proposes to address the issue—that a plaintiff must “show at the outset that such a[n additional majority-minority] district can be created without making race the predominant factor in its creation.” Alito, p. 5. And this is Plaintiffs’ burden. Id. This is also consistent with Chief Justice Roberts’ approach, that the illustrative plans had to be maps the state could enact. Roberts, p. 12.

Because the illustrative plans in this case could not be enacted by the State, the Plaintiffs have not put forth evidence sufficient to satisfy the first Gingles precondition. As a result, Plaintiffs have failed to carry their burden, and Defendants are entitled to judgment as a matter of law.

II. The third Gingles precondition.

The majority opinion does not provide much direct guidance for lower courts on a plaintiff’s evidentiary burden in satisfying the third Gingles precondition, because that precondition was not squarely at issue in Allen. Unlike Defendants here, Alabama conceded that the third precondition was satisfied, so there was no reason for the District Court or the Supreme Court to address any other arguments. But to the extent the majority says anything about the third Gingles precondition (racial polarization), it supports Defendants here.

A. Chief Justice Roberts’ majority opinion reinforces the Defendants’ interpretation of the evidence required to establish the third Gingles precondition.

Chief Justice Roberts recounts the history of the events leading to the 1982 amendments to Section 2 of the Voting Rights Act. And he focuses on City of Mobile v. Bolden, the case that catalyzed changes to the Act proposed and adopted by Congress just two years later. 446 U.S. 55 (1980). The majority noted the sharp disagreement surrounding the Bolden decision in Congress, with one side of the debate clamoring for a rework of the statutory language to allow for an “effects” test, and others expressing concern that such a test would create a right to proportional representation among the races in elected bodies, thereby entrenching “more, not less, racial and ethnic polarization.” Roberts, p. 4. (quoting Wall Street J., Jan. 19, 1982, p. 28). This initial recognition of racial polarization is appropriate, because returning to the Bolden case as Chief Justice Roberts did demonstrates how policymakers viewed the term “racial polarization” at the time the amendments were passed. Thus, to understand the analysis in Allen, we have to review Bolden.

1. ***The Bolden case--from trial court to Supreme Court and through the 1982 amendments it inspired--offers support for Defendants' view on racial polarization.***

Though not using the magic words of “racial polarization,” the Bolden trial court provides a comprehensive definition of racial polarization, offering a view of what a plaintiff is required to show in order to demonstrate it:

In the 1960's and 1970's there has been general [racial] polarization in the white and black voting. The polarization has occurred with **white voting for white** and **black for black** if a white is opposed to a black, or if the race is between two white candidates and one candidate is identified with a favorable vote in the black wards, or identified with sponsoring particularized black needs. When this occurs, a **white backlash** occurs which usually results in the defeat of the black candidate or the white candidate identified with the blacks.

Bolden v. Mobile, 423 F. Supp. 384, 388 (S.D. Ala. 1976) (emphasis added).

Thus, in the period before the 1982 amendments, the race of the candidate and corresponding voter behavior was paramount to a polarized-voting analysis. If a Black candidate is running against a white candidate, racial polarization occurs “with white voting for white and black for black if a white is opposed to a black....” Id. We can also see that when the only option to voters is a choice between white candidates, race still underlies the racial polarization inquiry. That is because the trial court first concluded it must determine which white candidate is associated with “the black wards” or “identified with sponsoring particularized black needs.” If such candidate is readily identifiable, the court

then must determine whether “a white backlash” occurred resulting in the usual defeat of the Black-preferred white candidate. Id. The use of the term “backlash” here is important because it suggests a change or alteration in voting patterns by a white majority that occurs on account of race. In other words, it is because the candidate is Black, or it is because a white candidate is identified with Black interests, that gives rise to the inference of racial polarization in differential racial bloc voting patterns. It is not merely differential racial voting patterns standing alone.

On appeal, the Fifth Circuit agreed with the factual finding that the plaintiffs presented sufficient evidence to show racial polarization. “No black had achieved election to the city commission due, in part, to racially polarized voting of an acute nature.” Bolden v. Mobile, 571 F.2d 238, 243 (5th Cir. 1978). The Supreme Court also accepted the trial court definition: “[T]he District Court based its conclusion of unconstitutionality primarily on the fact that no Negro had ever been elected to the City Commission, apparently because of the pervasiveness of racially polarized voting in Mobile.” Bolden, 446 U.S. at 71.

Of course, the presence of racially polarized voting did not alter the outcome in Bolden because the Court determined that intent was necessary to a Section 2 case, and it was against this backdrop that Congress enacted the 1982 amendments to override the Court’s decision in Bolden, as Chief Justice

Roberts explained. But neither the text of amended Section 2 nor the Senate Report discussing the amendment process purport to alter or recast what was understood to be racially polarized voting at the time. Accordingly, the Bolden trial court's definition of racial polarization remains undisturbed. And this definition is in line with how the Supreme Court viewed it almost ten years earlier in Whitcomb v. Chavis, which the 1982 amendments sought to restore after Bolden. 403 U.S. 124 (1971).

[T]he failure of the [minority residents] to have legislative seats in proportion to its population emerges more as a function of losing elections than of built-in bias against poor [minorities]. The voting power of [minority] residents may have been "cancelled out" as the District Court held, but this seems a mere euphemism for political defeat at the polls.

Id. at 153.

Of course, Justice Brennan attempted in Gingles to change the definition of racially polarized voting into one concerned purely with the mathematical results of voting patterns, but his view was specifically rejected by five Justices on this point. See, e.g., Gingles, 478 U.S. at 83 (White, J., concurring) ("I doubt that this is what Congress had in mind in amending § 2 as it did, and it seems quite at odds with the discussion in Whitcomb . . ."); see also, id. at 101 (O'Connor, J., concurring the judgment) ("I agree with Justice White that Justice Brennan's conclusion that the race of the candidate is always irrelevant

in identifying racially polarized voting conflicts with Whitcomb”). Instead, Justice White (who dissented in Bolden and authored the majority opinion of the Court in Whitcomb) specifically would have held that racially polarized voting requires a showing of racial causation. Id.

2. *The Roberts majority opinion reaffirms the vitality of the Whitcomb and Bolden definitions of racial polarization in its brief discussion of the third Gingles precondition.*

After discussing Bolden and the subsequent amendments, the majority opinion in Allen noted that “[t]he third [Gingles] precondition, focused on racially polarized voting, ‘establish[es] that the challenged districting thwarts a distinctive minority vote’ ***at least plausibly on account of race.***” Roberts, p. 11 (emphasis added) (citing to Grove v. Emison, 507 U.S. 25, 40 (1993)). It is significant that the Chief Justice recognizes the racial causation element not just in the context of the broader Section 2 inquiry, but also within the discrete inquiry into whether the plaintiffs have proven the third Gingles precondition. The existence of this causal element harkens back to the Bolden trial court’s definition of racial polarization that requires a “white backlash,” i.e., a majority voting bloc motivated in some identifiable way “on account of race.”

3. *The majority opinion could not affect or change its third Gingles precondition jurisprudence because the issue was not before the Court in any meaningful way.*

But the next mention in the majority opinion of the third Gingles precondition explains why the Supreme Court did not offer any additional clarity on it—because there was “no reason to disturb the District Court’s careful factual findings, which are subject to clear error review **and have gone unchallenged by Alabama in any event.**” Roberts, p. 14 (emphasis added). And this lack of dispute removed from the majority decision any discussion of the issue raised by Defendants here.²

So, unlike here, there was no consideration of what kind of statistical evidence is necessary at the third Gingles precondition to demonstrate racial polarization in the electorate as distinct from partisan polarization. Put

² Although it should not matter, even in the district court, Alabama hardly pressed a partisan polarization argument, as it conceded that voting was racially polarized. The Alabama defendants’ expert “testified that he and [the plaintiffs’ expert] ‘both found evidence of racially polarized voting in Alabama.’ Singleton v. Merrill, 582 F. Supp. 3d 924, 991 (N.D. Ala. 2022). And “[t]he only evidence Defendants offer to support their assertion that party, not race, may be the real issue is the recent election of a Black Republican, Kenneth Paschal, to the Alabama House from a majority-white district.” Merrill, 582 F. Supp. 3d at 1019. By contrast, Defendants here have pressed the point that partisan polarization best explains the data at every opportunity and articulated the insufficiency of the statistical analysis provided by Plaintiffs, which only shows bloc voting on account of party in Georgia elections.

differently, there was no discussion of whether the data supported the position that Black voters were losing at the polls due to bloc voting “at least plausibly on account of race,” (Roberts, p. 11) or whether those losses simply reflected “a mere euphemism for political defeat at the polls.” Whitcomb, 403 U.S. at 153.³

Next, the Supreme Court credited the District Court with “faithfully appl[ying]” its precedents. Roberts, p. 15. And this is unsurprising because, unlike Defendants here, Alabama’s litigation strategy was apparently that “Gingles must be overruled.” Roberts, p. 25 (four justices); see also, Kavanaugh, p. 1 (“[T]he upshot of Alabama’s argument is that the Court should overrule Gingles.”). But as Defendants have repeatedly noted in briefing and at oral argument: Gingles remains the standard for Section 2 cases, and Defendants’ legal analysis is perfectly in line with existing precedent. The key is that courts must give effect to all the aspects of the

³ Plaintiffs may suggest that the causal elements of racially polarized voting identified in Whitcomb, White, Bolden, and the majority of justices in Gingles means that they can satisfy their evidentiary burden as to the third Gingles precondition by an inference of racial causation. But, at least in the Eleventh Circuit, Section 2 plaintiffs “must be careful not to infer that racial targeting is, in fact, occurring based solely on evidence of partisanship.” League of Women Voters of Fla. Inc. v. Fla. Sec’y of State, 66 F. 4th 905, 924 (11th Cir. 2023)

Gingles opinion (including the concurring opinions) and take into account still relevant (and controlling) pre-amendment Supreme Court precedent.

B. The third Gingles precondition operates as a temporal limitation on the reach of Section 2, thus assuaging concerns raised by Justice Kavanaugh in his concurring opinion.

Justice Kavanaugh references an argument not made by Alabama—a “temporal argument” that calls into question the constitutionality of Section 2, which creates an additional reason for the Court to adopt Defendants’ argument on the third Gingles precondition. Kavanaugh, p. 4. Defendants’ approach to this precondition operates as a naturally occurring temporal limitation on the reach of Section 2. Since the passage of the 1982 amendments, voting patterns have doubtless become far more partisan. But, crucially, as Plaintiffs’ evidence demonstrates, they have also become less focused on the race of the candidate so that the race of the candidate is irrelevant in current Georgia elections.⁴

Unlike during the time of Gingles, white voters consistently support Black and Black-preferred candidates who are nominated in their party’s primary. Lately, this has been true of both major political parties in Georgia.

⁴ Plaintiffs’ own expert reports make this abundantly clear.

Adopting Defendants’ interpretation of the third Gingles precondition anchors the Act in—as its text dictates—correcting the problem of invidious racial discrimination that results in a jurisdiction that is not equally open to minority voters. Over time, the trend may be that the disadvantages associated with invidious discrimination in elections are addressed to such a degree that Section 2 no longer need be invoked to ensure “equal openness” to the election process. Thus, there is no concern about the timing of continuing race-based districting into the future because a proper interpretation of the third Gingles precondition addresses that exact concern in a way that preserves not just the Supreme Court’s decades of jurisprudence interpreting the Act, but the Act itself.

C. Failing to adopt the Defendants’ interpretation of the third Gingles precondition puts Section 2 on a problematic constitutional path.

While a majority of the Supreme Court approved the ongoing constitutionality of Section 2, a minority of four justices called it into question. More importantly, Justice Kavanaugh’s concurring opinion—the fifth vote—makes abundantly clear that the constitutionality of the law is not at all settled into the future. And like the broader inquiry into the third Gingles precondition itself, the question of whether it is appropriate to declare Section 2 unconstitutional because of a temporal limitation was not squarely before

the Court. Kavanaugh, p. 4. Only Defendants’ interpretation of the third Gingles precondition, consistent with voting patterns in Georgia, helps ensure Section 2 endures unless and until it is determined, in the wisdom of Congress, that it has outlived its usefulness.

III. The totality of the circumstances.

Section 2 is aimed at equal openness in the political processes of a state. 52 U.S.C. § 10301. Thus, a “district is not equally open, in other words, when minority voters face—unlike their majority peers—bloc voting along racial lines, arising against the backdrop of substantial racial discrimination within the State, that renders a minority vote unequal to a vote by a nonminority voter.” Roberts, p. 17 (emphasis added). That is the question this Court must answer under Section 2. If minority voters face voting against the backdrop of substantial political polarization within a state, their votes are not unequal—because numerical minorities lose elections. Hall, 512 U.S. at 901 (Thomas, J., concurring).

That is why, unlike what Alabama argued, the totality of the circumstances is not based on a single circumstance, but must be carefully weighed by this Court to look for racial discrimination in the Georgia election system. Roberts, p. 18. And this requires an “intensely local appraisal” and a

“searching practical evaluation.” Roberts, p. 11 (quoting Gingles, 478 U.S. at 79).

Beyond those points, Allen does not offer any direction to this Court on how to apply the totality of the circumstances. Accordingly, Defendants rely on their earlier briefing in opposition to Plaintiffs’ motion for summary judgment about why that determination is inappropriate at this stage of the case.

THE UNANSWERED QUESTIONS

Despite hopes of further clarifying Section 2 law, the Allen majority ultimately left a number of unanswered questions that must be addressed here. The majority made clear that Section 2 required Alabama to divide a single community of interest to create an additional majority-Black district, primarily because a community would be divided either way and it did not affect the overall plan metrics. Roberts, pp. 12-13.

While that seems straightforward, much more is at issue in this case, and Plaintiffs’ approach here would extend the reach of federal law far deeper into districting decisions by legislatures. For example:

- Does Section 2 require the division of more counties to create additional majority-Black districts? If so, how many and why?

- Does Section 2 require the state to increase its population deviations to create additional majority-Black districts? If so, how much and why?
- Does Section 2 require the state to draw additional majority-Black districts even if those districts result in other districts that are unexplainable based on traditional districting principles in other parts of the state? If so, why, and are there any protections for traditional principles in non-majority-Black districts?
- How many additional districts does Section 2 require? If the legislature is able to draw seven additional majority-Black legislative districts, does Section 2 require it to keep adding districts up to proportionality so long as there are no “tentacles and appendages” (see Roberts, p. 12)? Or is that racial gerrymandering?
- How can this Court determine the nature of the polarized voting without more evidence?

Defendants submit that these questions are where Plaintiffs’ lack of evidence is most glaring. If Plaintiffs had submitted illustrative plans with the same population deviation and the same number of split counties, been able to explain the overall design of the other districts, or provided evidence of racial

voting behavior in primaries, then this case would be more like Allen. But they have not done so and have not proposed any limiting principle beyond the districts they challenge—which is not enough for the State to have clarity on the law of Section 2 moving forward.

CONCLUSION

The Voting Rights Act need not remain forever ambiguous, but Allen does not offer this Court much assistance with the salient questions before it, especially given the different arguments made by Alabama and Defendants. The facts of this case demonstrate that Plaintiffs have failed to carry their burden regarding material facts necessary to the Gingles preconditions and that judgment should be entered for Defendants.

Respectfully submitted this 22nd day of June, 2023.
